

Brainstorming & Idea Prioritization Template

Date	1 October 2026
Team ID	SWTID-2026-7957
Project Name	EduGenie Google Gemini Powered Learning Assistant
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Mohamed Nishaal M Y (Team Leader)	Use a hybrid AI setup: Gemini API for Q&A, quizzes, summaries and learning paths, and the lightweight local LaMini-Flan-T5 model for simple concept explanations.	AI Model Integration	1
2	Mohamed Nishaal M Y (Team Leader)	Build a modular FastAPI backend with one endpoint per feature (/qa, /explain, /quiz, /summarize, /learn/recommendations).	Backend API Development	2
3	Manoj M	Generate 3 multiple-choice questions (4 options each) for any topic, with an instant Correct / Incorrect check that also shows the right answer.	AI Feature Design	1
4	Manoj M	Clean and validate the JSON returned by Gemini (remove Markdown code fences, check options and answer) so bad AI output never breaks the quiz screen.	Reliability & Error Handling	4
5	Meiappan N	Design a simple, responsive single-page interface with a task dropdown (Ask, Explain, Summarize, Quiz, Learning Path), one text box and one submit button.	Frontend UI Development	3
6	Meiappan N	Render the AI's Markdown output (headings, bold text, bullet lists) so learning paths and summaries are easy to read.	UI / UX	3
7	Mohamed Anas S	Create a learning-path generator that suggests beginner, intermediate and advanced levels with estimated time and trusted resources (for example, SQL).	AI Feature Design	1
8	Mohamed Anas S	Add a summarizer that turns long passages into short notes in simple language for quick revision.	AI Feature Design	1
9	Mohamed Jahir J	Deploy the app on Vercel and keep the Gemini API key in environment variables, never in the GitHub repository.	Deployment & Security	4
10	Mohamed Jahir J	Future scope: voice input, multilingual support, progress-tracking dashboards, and Learning Management System (LMS) integration.	Future Enhancements	5

Step 2: Idea Prioritization

Each grouped idea is rated on feasibility and importance, and the final ideas to move forward with are selected.

Group No.	Final Idea	Feasibility (High / Medium / Low)	Importance (High / Medium / Low)	Priority (Yes/No)	Selected (Yes/No)
1	Core AI Learning Features (Q&A, concept explanation, quiz generation, summarization, learning paths)	High	High	Yes	Yes
2	Modular FastAPI Backend with one endpoint per feature	High	High	Yes	Yes
3	Responsive Single-Page Interface (task dropdown, quiz feedback, readable Markdown output)	High	Medium	Yes	Yes
4	Deployment, Secure API Key Handling and Error Handling	High	High	Yes	Yes
5	Future Enhancements (voice, multilingual, progress tracking, LMS integration)	Medium	Medium	No	No

Outcome: Groups 1 to 4 are selected and form the scope of the delivered EduGenie application. Group 5 is feasible but not essential for the first release, so it is kept as future scope.
